

Rec. May 13/57

May 9, 1957
Bulletin DC57-15

TO ALL SEEBURG DISTRIBUTORS:

Attention: Service Managers

A 2.2 megohm, 1/2 watt resistor (Part No. 82464) is being added to the Select-O-Matic mechanisms of the "K" and "L" as shown below.

The resistor eliminates audio "pops" experienced in some phonographs when the mute switches operate. The change is not significant enough to justify addition to existing phonographs unless a particular instrument has an objectionably loud "pop".

Sincerely yours,

C. M. Smith

C. M. Smith
