

J. P. SEEBURG
A DIVISION OF FORT PITT INDUSTRIES, INCORPORATED

Rec. J. P. Seeburg
5/27/57

May 28, 1957
Bulletin DC57-21

TO ALL SEEBURG DISTRIBUTORS:

Attention: Service Managers

The .1 mfd condenser on the reversing switch of the Select-O-Matic mechanism will be deleted from production units. This condenser is being deleted to reduce motor reversing transients. Its removal results in reduction to approximately one-fifth the amplitude of the transient that is had when the condenser is used with a reversing switch having properly adjusted contacts. Elimination of the condenser does not affect the contact arcing one way or another.

Sincerely yours,

C. M. Smith
Manager of Field Service
