Unit #11 - 306 Rexdale Blvd.  
Rexdale, Ontario

Dear Dariel:

We are in receipt of the information regarding amplifiers that you requested in your letter of May 7th.....

Interchangeability of Deutsche Wurlitzer amplifiers

- a. Phonograph playing the record vertically (old mechanism).  
Since 1965 we used transistorized amplifiers. Although the circuit details differ from model to model, outside dimensions and electrical connections are identical. Therefore amplifiers from phonographs built 1965 to 1969 all can be interchanged. Please observe that the two basic amplifier lines, MONO and STEREO can not be interchanged.
- b. Phonographs playing the record horizontally (new mechanism).  
Only one type of MONO and one type of STEREO amplifier exists.

The audio circuitry of amplifiers for both mechanisms is identical. Only the power supply circuits are different.

If it is decided that you will require these amplifiers, please contact us in regards to price.

Thank you for your inquiry. My kindest personal regards.

Sincerely yours

THE WURLITZER COMPANY
